

Smart PDF Analyzer - Test Document

Purpose

This PDF is designed to test the CST8917 Smart PDF Analyzer midterm project. It contains normal text, PDF metadata, several pages, and patterns that should be detected by the sensitive-data activity.

Contact Information for Detection

Type	Sample Value
Email	student.test@example.com
Phone	613-555-0199
Website	https://example.com/smart-pdf-analyzer
Date	2026-06-25
Alternate Date	25/06/2026

Sample Paragraph

Azure Durable Functions can coordinate serverless workflows. In this project, the Blob Trigger starts an orchestration when a PDF is uploaded to the pdfs container. The orchestrator runs extraction, metadata, statistics, and sensitive-data activities in parallel. The final result is stored in Azure Table Storage and can be retrieved using an HTTP endpoint.

Additional test contact: qa.user@college.example. Secondary phone: (343) 555-0101. Documentation URL: www.example.org/docs. Review date: 2026/06/27.

Page 2 - More Text for Statistics

This second page exists to test page count and average words per page. It also provides enough text to make the word count more meaningful. The report should identify that this document has two pages. The estimated reading time should be calculated using the total number of words divided by a common reading speed such as 200 words per minute.

The document intentionally contains repeated cloud terms such as Azure Functions, Durable Functions, Blob Storage, Table Storage, orchestration, activity functions, JSON report, and HTTP API. These words help verify text extraction and statistical analysis.

This document is not a real resume and does not contain real personal information. All contact details are fake examples created only for testing the PDF analyzer.
